CEMENT PLANT CONVEYING SYSTEMS

United States Systems has broken the cement unloading time barrier. Now you can handle more cement in less time than ever before with a United States Systems cement unloading system. We have designed and built in-plant systems to unload covered hopper railcars,

move cement from storage to use (both at a rate of 1 million pounds per day), and unload pneumatic trailers to silo storage (50,000 lbs. to a 70' high silo in 20 minutes using only 60 HP). We design and build our systems to meet your specific requirements and our design engineers follow the project from design to manufacturing to start-up. Most of our customers are repeat customers. If our rates have captured your interests, we invite you to join our repeat customers and let us know what we can do for you.
